

Openings Studio uses building information management (BIM) technology to create & visualise 3D doors, frames and hardware objects.

ASSA ABLOY

ASSA ABLOY is the global leader in door opening solutions, dedicated to satisfying end-user needs for security, safety and convenience.

ASSA ABLOY is represented in all major regions, in both mature and emerging markets, with leading positions in Australia, Europe and North America.

As the world's leading lock group, ASSA ABLOY offers a more complete product range of door opening solutions than any other company on the market.

Openings Studio

ASSA ABLOY

The global leader in door opening solutions

Build & modify customised openings

No more manually entering hardware information into door schedules. With Openings Studio, seamlessly integrate product details into opening models for use in schedules.

- Integrate directly with BIM design software, such as Autodesk Revit®.
- Web-based, password protected modules are discreetly accessible by architects, contractors, suppliers and facility end users.
- Compare material selection and value propositions through a non-proprietary database that includes variable pricing options to guide product budgetary decisions.
- Access and download manufacturer catalogues, technical data sheets, wiring diagrams, templates, photo galleries and more.
- Make “complete openings” using a unique configuration engine, which produces doors, frames, hardware and specifications.
- Render complete openings, with hardware. These can be previewed in 3D, prior to final documents printing, and seen in context using the Building View tool. Materials and finishes are high quality, with hardware placed at industry standards, to assist with design decisions and approvals.
- Dynamic, on-board Spec Builder feature produces three-part formatted Microsoft Word specification section matching 3D models for use in project contract documents.

Enhance Productivity

ASSA ABLOY Openings Studio™ is designed to make door specifications easier, enhance productivity and reduce project costs.

Improve return on investment in technology, overhead & marketing to support increased demand for BIM design. Create parametric, door and frame BIM-ready models “on the fly” for libraries and projects.
